k. **Description of Request:** The applicant proposes to replace the existing four-foot-high wooden flashboard spillway gates with Obermeyer gates at the Goat Rock Development of the project. The Obermeyer gates would allow the applicant to regulate the Goat Rock lake levels more effectively. The applicant would raise and lower the Obermeyer gates to match inflows more closely during high flow events. The applicant would perform all work to install the Obermeyer gates behind a bulkhead that would be anchored on the upstream side of the dam. The Obermeyer gate installation is expected to last 18 to 24 months. This proposed action does not require a drawdown of Goat Rock Lake. The applicant proposes laydown areas in previously disturbed areas and to construct a temporary pier/platform for equipment. During construction and following the Obermeyer gate installation, the licensee would operate the Goat Rock Lake and powerhouse within the current project license range of 398 – 404 feet. The applicant states that the proposal does not change any of the project features or operations. The project will continue to operate under the terms of its current license and applicable Water Quality Certification.
